

WORK SHEET

Module 3.5

Forward-Angle Parking

Of all the parking maneuvers, forward angle parking is the least complex.

1. Check your front and rear zone conditions and signal your intentions.
2. Approach 6-8 feet away from parked vehicles
3. See the center of the space.
4. Creep and turn the wheel fast.
5. Stop at your forward reference point.
6. See the curb align with the left front corner post.
7. When un-parking, shift to reverse.
8. Begin turning when you see the bumper align with your pivot point and the other bumper align with your mirror.
9. Continue backing until you have cleared the vehicles.
10. Straighten the wheels.
11. Shift to drive, scan 360° and exit the lot.
